The Rearing of Young Poultry

RAISING CHICKENS

Three Different Stages Outlined

A full realization by those taking up the rearing of poultry that a re-arrangement of the farm is necessary to provide the best possible conditions for the raising of poultry is a common mistake. It is the history of the rearing of poultry that the rearing of poultry is a "job" which requires a certain amount of skill and experience.

For example, instead of building a large, open-sided house, a better plan is to build a house with a gable roof and a concrete floor. This will keep the birds dry and clean, and will also keep the birds from getting into the soil.

Best Stage of System

The best stage is a system of rearing in which the birds are reared in a house with a gable roof and a concrete floor. This will keep the birds dry and clean, and will also keep the birds from getting into the soil.

Best of the System

An essential feature of the plan outlined in the rearing of birds is the use of a concrete floor. This will keep the birds dry and clean, and will also keep the birds from getting into the soil.
